CHAM-MATE clean procedures:

Basically CHAM-MATE is functioned in water.

1. For **Class-B vacuum functioned autoclaves**, or **autoclaves with independent steam generator**, the **CHAM-MATE** must be mixed with water, first. (1 bag mixed into 2,000cc water), And then, pouring the mixed **CHAM-MATE** into the chamber, and start working cycle.
 - 1-1. For **Class-S no vacuum autoclaves (with auto-add water function)**, put the **CHAM-MATE** powder into the chamber directly, and start the working cycle.
 - 1-2. For **Class-N (manual add water function)**, put the **CHAM-MATE** powder into the chamber Directly. And then, pouring water into the chamber, and start working cycle.

PLEASE NOTE: Running one sterilization cycle, (without the dry function) .

2. Drain off all the balance water from the chamber and water reservoir.
3. Open the door, wipe the chamber and the door with a wet, non-lint cloth.

PS:Use one more bag of CHAM-MATE and recycle again as above procedures, if there are dregs in the chamber still.

NOTE: "For chamber and piping system clean only."

CHAM-MATE quantity to be used:

- Chamber size under 30 liter---1 bag cham-mate.
- Chamber size 30-100 liter-----2 bags cham-mate.
- Chamber size over 100 liter----1 bag more per 100 liter more.
